FOR IMMEDIATE RELEASE

**COOL ENERGY INVITED TO PRESENT INNOVATIVE SOLAR SOLUTION
AT EUROPEAN TRANSATLANTIC GREEN PLATFORM 2009**

BOULDER, CO, May 27, 2009—Cool Energy, Inc., a clean energy technology company, today announced it has been selected and confirmed to participate in the Transatlantic Green Platform 2009 (www.transatlanticgreenplatform.com) being held in conjunction with the World Investment Conference in La Baule, France, June 3th to June 5th 2009.

“We are very excited to have been invited to this year’s prestigious European Transatlantic Green Platform,” said Glenn Booth, Vice President of Marketing and Business Development at Cool Energy. “Cool Energy’s solar powered heat and power solution is particularly compelling to European customers. The Transatlantic Green Platform will allow us to present our underlying low-temperature Stirling engine technology and full solution to top European corporate executives.”

Hosted by Europe Plus Foundation and Avise Partners, the Transatlantic Green Platform (TGP) will feature some of the world’s most promising clean-tech companies and introduce them to European utility, energy and manufacturing leaders from BP, Total, EDF, Veolia, Siemens, Cool Energy and Renault among others.

This high-profile event will enable Cool Energy’s CEO, Sam Weaver to present and meet with high-level technology and business development executives from Europe’s largest clean-tech players. “This is an excellent opportunity for Mr. Weaver and Cool Energy to engage with qualified prospects, partners, and investors.” said Jean-Bernard Guerrée, Managing Director at Avise Partners.

TGP 2009 sponsors include Business Wire, Invest in Western France, Europe+ Foundation, Nair & Co Inc., Avenir Finance and Caliber One. Global press coverage includes CNBC Europe,

Euronews, Financial Times, LCI, Les Echos, M6, Public Broadcasting Service, Time Magazine and others.

About Cool Energy, Inc.

Cool Energy, Inc. is a clean energy technology development company that has developed the SolarFlow™ System—a combined Solar Thermal Heating and Electricity Generation System optimized for homes and small commercial buildings. The SolarFlow System incorporates the SolarHeart™ Engine, an innovative and proprietary low temperature Stirling Engine for conversion of solar thermal energy to electricity. Cool Energy has also been awarded grant funding from the National Science Foundation and the State of Colorado Governor's Energy Office.
